

# Credit Bureau Reseller Achieves Compliance with HPE Fortify OnDemand

HPE's dynamic scanning reduces speed-to-compliance

Case Study

## SOLUTIONS

HPE Fortify On Demand  
HPE ALM

## INDUSTRY

Real Estate

## The Opportunity

VerticalRent® is a cloud-based tenant screening and property management solution with an intuitive interface. Used by over 10,000 realtors, landlords, and property managers across the United States, it has grown to become the premier software-as-a-service platform for the real estate industry.

Partnering with both Experian® and TransUnion® to offer applicant credit reports to their customers, VerticalRent must adhere to stringent Credit Bureau and PCI-DSS standards, including extensive penetration and vulnerability testing requirements.

## The Solution

ResultsPositive, a leading application security provider and HPE Platinum Partner, teamed up with VerticalRent to help design and implement a comprehensive information security policy. As part of the policy, ResultsPositive recommended HPE Fortify On Demand's dynamic testing capability. This satisfied the quarterly vulnerability scans, along with focused penetration testing assistance.

The purpose of the two-prong approach with VerticalRent was to:

- To help design, advise, and develop a comprehensive Information Security Policy, ensuring VerticalRent's compliance with PCI-DSS and Credit Bureau requirements.
- To enable and train VerticalRent's R&D team on how to use HPE FOD while also providing them with focused penetration testing services to augment the Fortify vulnerability scans.

Within two weeks, ResultsPositive was able to ensure VerticalRent had the appropriate mechanisms in place to monitor, scan, and pass their quarterly compliance requirements.

## The Benefits

- Fortified VerticalRent's application servers on Amazon AWS while expediting remediation of critical and high issues.
- Rapidly enabled the VerticalRent R&D team on how to setup scheduled scans and quickly report out for compliance.
- Provided VerticalRent with documented penetration tests that the team can automate and run against its Amazon AWS hosted products.
