Make a **Difference**

Mobile Center 2.0

Marco Argenti, VP of Mobile at Amazon Web Services, understands the challenges of modern mobile development. “For mobile app developers, delivering high-quality apps across all of the different device and OS combinations is a major effort – it can be time consuming, complicated, and expensive.”

HPE Mobile Center 2.0 helps foster freedom and flexibility in mobile development with new open source tools, predictive analytics, and robust cloud testing support.

Develop Your Way

User Experience

Mobile Center 2.0 provides real-user experiences through a combination of virtual users and real devices. In-app analytics identify issues long before deployment. Enjoy performance optimization and on-demand replay tests through real devices in the AWS Cloud.

Freedom and Flexibility

Freely choose from a variety of frameworks and processes to build apps fast. Quickly and securely test apps on smartphones, tablets, and other devices.

Enjoy increased mobile performance and optimization for Google Chrome, Safari, Android, and iOS devices. Enjoy detailed network functionality and application performance information.

Creative Choice

Test packaged or original versions of applications with new open-source integrations like Appium and Selenium. Foster end-to-end security for mobile devices with an updated Jenkins plugin that can override Mobile Center connections for UFT.

Start Today

Raffi Margalio, HPE SVP & GM of Application Delivery Management knows Mobile Center’s potential. “HPE Mobile Center 2.0 leverages HPE’s unique strengths in machine learning and security to provide developers with deep intelligence that guides them in building high-quality and secure applications. By integrating with open source tools we allow developers to leverage these powerful capabilities while operating in the application frameworks and processes of their choice.”

Reward yourself with Mobile Center 2.0. Spend less time fixing problems and more time developing great apps.
